1 Introduction

This notebook is intended to help decide where to have dinner in San Francisco, safely. The data used for this are: 1. [Foursquare API](#) 2. [SF Police Department Incident Reports: 2018 to Present](#)

The final product of the notebook is an interactive map of SE, with districts colored by crime rate and markers showing restaurants, as well as sample crimes in the vicinity.

1.1 Crime dataset exploration

The dataset published by the SFPD includes important information regarding the incident (e.g. category) as well as its location. Most of the data in the 34 columns of this dataset (shown in table 1.1) will be useless for the purpose of this notebook, so only Police District, Latitude, Longitude and Incident Category will be retained, as illustrated in table 1.2.

Table 1.1: Top 5 rows of the original SFPD crimes dataset

[illegible]

Table 1.2: Top 5 rows, only relevant columns

	Police District	Latitude	Longitude	Incident Category
0	Southern	37.784908	-122.404795	Other Miscellaneous
1	Central	37.786410	-122.408036	Lost Property
2	Mission	37.756834	-122.406699	Assault
3	Southern	37.784007	-122.404865	Larceny Theft
4	Central	NaN	NaN	Larceny Theft

Some of the incidents reported are not relevant or too vague to include in the analysis, so they will be dropped. Incidents from categories Gambling, Liquor Laws, Vehicle Impounded, Vehicle Misplaced, Case Closure, Other, Miscellaneous Investigation, Recovered Vehicle, Non-Criminal, Other Miscellaneous amount to 36124 and after filtering the dataset is left with 158729 incidents. Table ?? shows number of incidents per category, also visualized in figure 1.2. Figure 1.1 shows the incident numbers per district and figure 1.3 as well as table ?? show that information combined.

	Incident Category	Count
0	Human Trafficking, Commercial Sex Acts	5
1	Weapons Offence	6
2	Homicide	30
3	Suspicious	32
4	Motor Vehicle Theft?	37
5	Rape	56
6	Drug Violation	61

2 Venues dataset exploration

For each of the districts in the SFPD dataset a single incident was randomly selected in order to get its latitude and longitude, which the serve to query the Foursquare API. Again the full dataset consist 31 columns, of which only several (`['venue.location.lat', 'venue.location.lng', 'venue.name']`) will be useful for the purpose of this analysis, other columns will be dropped, as well as locations with NaN coordinates. At the time of writing of this report - the venue dataset consisted of 884 restaurants.

777

478

	Police District	venue.location.lat	venue.location.lng	venue.name	venue.id	rating
0	Bayview	37.734826	-122.390764	Radio Africa & Kitchen	4f56b36a6b7406c0ea010e9b	8.4
1	Bayview	37.736240	-122.390361	TATO	5b89f7f6a0215b002c7cfd73	8.4

2.1 Explore highest rated restaurants by district

As the first step to choose the best place to dine we will look into how ratings per district are distributed.

Table 2.1: Venues count by district and rating count

Police District rating	Bayview	Central	Ingleside	Mission	Northern	Park	Richmond
(5, 6]	1	0	4	0	0	0	0
(6, 7]	2	0	13	0	0	0	12
(7, 8]	3	24	14	24	28	31	12
(8, 9]	3	73	6	61	63	58	8
(9, 10]	0	3	0	15	9	11	0

Based on table 2.1 - the districts that have the highest rated venues are Central and Mission, however these are also heavily influenced by crime, as shown in figure 1.1. We need to select the neighborhood with best food and relatively low crime. Northern district is 2nd in terms of number of highly rated venues and 3rd in crime rate, however Park district has lowest crime yet pretty decent food, as well.

3 Conclusions

Based on analysis of the crime data and venue information provided via Foursquare API we were able to determine that the Park district is the safest (disregarding the kind of incidents, only looking at the volume) while having relatively decent restaurants.
